Membership meetings are the
4th Tuesday of the month, unless noted

#### **BE A GOOD EGG NEEDS YOU!**

Are you interested in volunteering on any of these days? Please email NYcoast@audubon.org or call (516) 922-3200 to sign up for the specific dates/locations that work for you. It's a fun opportunity to be on the beach, educate beach goers about nesting birds, and make a real difference

Sat 6/15 Stehli Town Beach, Bayville

Sat 6/22 Lido Beach Town Park, Lido Beach

Sun 6/23 Sunken Meadow State Park, Kings Park

Sat 6/29 West Meadow Beach, Setauket

Sun 6/30 Sunken Meadow State Park, Kings Park

Sat 7/6 Jones Beach State Park, Field 2

Sun 7/7 Point Lookout Town Park, Point Lookout

Sat 7/13 Sunken Meadow State Park, Kings Park

Sun 7/14 West Meadow Beach, Setauket

Sat 7/20 Lido Beach Town Park, Lido Beach

Sun 7/21 Jones Beach State Park, Field 2

Sat 7/27 Sunken Meadow State Park, Kings Park

Sun 7/28 Point Lookout Town Park, Point Lookout

#### **GARVIES BIRD GARDEN UPDATE**

By Jill Vomacka

If you have not had an opportunity yet, visit Garvies Point Museum and Preserve and check out the Bird Garden and Native Plants there. It has been 6 years since we first started this project and the bushes and plants have filled in, grown and are now in blossom. All the rain has kept everything green and healthy without needing extra watering. The water feature is drawing our feathered friends in for a drink or a bath. Humming birds have been seen at Garvies. Put your feeders out for them. They are here in the area.

# Saturday, August 3 10am – 4pm

GARVIES POINT MUSEUM DAY

Hands-on nature programs & craft, guided tours of our beautiful native butterfly & bird-friendly gardens, beginner's bird watching, Insect study, Garvies Family History Tour, films & more! Fun for all ages, \*\$5.00 per person 5 yrs. & older, includes all activities & museum admission. Free for current members.

Tuesday, June 25 – Friday, August 30 GARVIES SUMMER DAY CAMPS

Hands-on learning, activities & crafts for children 5-7 & 8-11 years old

Tuesday - Friday 9:30am-12:30pm & 1-4pm OR 9:30am-4:00pm

ALL THEMES HAVE BEEN UPDATED!

**NATURE I:** Pond Investigation, Trees & Leaves, Insects & Spiders, Nature's Recycling (5-7, 8-11)

**NATURE II**: Beach Exploration, Animal Habitats, Flowers & Pollinators, All About Birds (5-7, 8-11)

**NATIVE AMERICAN:** Tools & Artifacts, Culture, Wigwam, Pottery, Games & Legends, Campfire cooking (5-7, 8-11)

**NEW!! JUNIOR GEOLOGIST:** Discovering Dinosaurs & Fossils, Daytime Astronomy, Rocks & Minerals, Erosion (5-7 only)

**GEOLOGY:** Rocks & Minerals, Water Erosion, Daytime Astronomy, Fossils, Local Geology (8-11 only)

MORNING (9:30am-12:30pm) & AFTERNOON (1-4pm) sessions available.

\$150/CHILD/FOUR AM or PM SESSIONS.

CHILDREN CAN STAY FOR 4 FULL DAYS for \$300/CHILD.

Registration & pre-payment required. No refunds

Thank You Whole Foods for generously supplying the refreshments at our general meetings. Whole Foods is located at Northern Blvd. and Port Washington Blvd.

#### From the President Peggy Maslow

#### **Owlet Recovery**

Cathy and Bobby Horvath of WINORR, Wildlife in Need of Rescue and Rehabilitation, rescued two Great Horned owlets at Hempstead Lake State Park the first week of April 2019. This is their story.

The parent owls had picked a possible past coopers hawk nest that fell over fifty feet to the ground with the owlets during stormy weather. WINORR responded and took the two owlets to a veterinarian who x-rayed them and found nothing broken. But one owlet needed two sutures.

Back at the Horvath residence, Cathy fed the owlets 25 mice a day each for 5 days, observing them to make sure they were ready to be returned to their parents. Meanwhile, Bobby built a nest box which he screwed into a different tree, close to the site of the first nest. The state park employees arranged orange saw horses as a symbolic barrier around the area to try to keep people from being too close. The parent great horned owls returned once the owlets were put into their new nest box.

On April 17, when I led a NSAS bird walk, one adult owl was clearly visible in a different tree near the box nest that held the owlets. A few weeks later the owlets were flying around the area, fullly recovered.

Cathy Horvath left her job as a veterinarian assistant to care for the over 900 animals a year that WIN-ORR services. She said she stopped counting after 900. She described to me some of her recent charges which included other Great Horned owls. Those that can't be rehabilitated stay with WINORR or sometimes go to Takapausha Preserve. The Horvath's use these injured birds that can't be released to educate audiences.

Cathy and Bobby Horvath depend totally on donations so here is their address for those who want to contribute to WINORR: 202 North Wyoming Ave., Massapequa, NY 11758. Here is Kathy's cell phone number, 516 293 0587, which is also listed on the Facebook page, if want to inform her of a bird in need of help.

#### **Bird Banding**

On May 11 at JFK Wildlife Preserve, Tobay Beach, where Harvey Farber bands birds on weekends in May, September and October during migration, we caught a male yellow warbler already with a band. Harvey looked up the number in his records and he originally banded the bird in May 2015, which means the bird is at least 5 years old since it was an adult in 2015. So we know that birds can live a few years. He once recaptured a common yellow throat that was at least 8 years old. Last spring he banded a brown creeper that

was recaptured in Ontario, Canada, which surprised him since the bird went west when released, instead of north. This is some of the excitement that comes with banding.

#### **Native Plant Garden**

Bayville Village now has a native plant garden thanks to the efforts of Bayville residents Barbara Garriel and David Gugerty, NSAS and a collaborative grant from AudubonNY. Also many thanks to Virginia Dankel, Barbara Mallon, Jennifer Wilson-Pines, Phil Benvin, Ken Krumenacker, John, and Jim Jones for their physical labor. The Village of Bayville helped by sending a dump truck to pick up free compost donated by LI Compost in Westbury. Glover Perennials delivered plants I ordered and Jennifer picked up more plants from Atlantic Nurseries in Dix Hills.

Please remember to contact me if you want help creating a bird-friendly habitat in your own yard with native plants.

Rewild, a fairly new group started in Port Washington, is collaborating with NSAS to plant 300 donated milkweed plants next to a NSAS native plant garden at Science Museum of Long Island. This group also helped tremendously in maintenance of the NSAS garden. Rewild is responsible for planting native plants soon at the Unitarian Church in Manhasset.

# 2019 NSAS Plant Sale a Huge SUCCESS By Jill Vomacka

Kathryne and I would like to thank all NSAS members, Friends of Garvies members and all other people who bought plants during our Native Plant Sale fundraiser this year! The proceedes will directly help pay for our speakers at general meetings, newsletters, mailings and web page technology costs (which keep rising every year).

In addition we would like to give a tremendous THANK YOU to Veronica Victoria (Director of Garvies Point Museum and Preserve) for putting all the plant information together as well as the order sheet with the help of Kathryne Natale (co-chair of the plant sale). The information on the plants was a tremendous help especially to beginner gardeners who needed it for their garden and made the order easy to calculate (for me).

A big THANK YOU to the staff at Garvies who helped tirelessly by setting up tables, rearranging the plants, labeling plants and assisting buyers with their plants to their car.

The expected showers held off until the sale ended. All extra plants were sold. Over 70 people bought plants and hundreds of plants were sold. Plant buyers came from as far as Sag Harbor. The word is getting out that the prices are right and the quality superb.

Until next year, HAPPY NATIVE PLANTING!

The Sile X and start with the start of the Sile X and start with the start of the s

#### Summer 2019 Leaderless Walks -BIRD WALK SCHEDULE

Walks are for beginners and experienced birders alike. Weather permitting, walks start at 9:30AM unless indicated otherwise \*\*\*.

Go to our website at www.northshoreaudubon.org/for directions and cancelations. We would like to encourage carpooling, where possible.

# Garlic Mustard poses threat to Long Island ecosystem

By Duffy Zimmerman

Emerald green leaves brushed against John Carbone's khakis as he waded through the sea of garlic mustard plants at the 62-acre Garvies Point Museum and Preserve in Glen Cove.

An employee at Garvies, Carbone led a group of nine volunteers on April 27th to pull as much of the weed as possible.

"We preserve the environment the best we can, but sometimes that means we have to remove a lot of stuff." Carbone said.

Garlic mustard, or Alliaria petiolata, is an invasive species that has spread rapidly in New York, with areas of highest density reported in the Long Island-Metro region, according to the New York iMap Invasives. Named for the distinct odor from its crushed leaves, garlic mustard is believed to have been brought to the United States from its native habitats in Europe and Asia for medicinal and culinary purposes about 150 years ago.

Since then, garlic mustard has invaded so much area that it poses a threat to native plants and animals. Environmentalists worry that without natural predators to keep it in check, this invasive species will overtake the ecosystem.

"Invasive plants like garlic mustard compete for light, water, nutrients, space, and other resources, and soon choke out native plants and the wildlife that depend on them," Bill Jacobs, the program manager for Long Island Invasive Species Management Area (LI-ISMA), said.

Although garlic mustard is easy to uproot, its reproductive abilities make eradicating the plant from large plots difficult. It is biennial, which means that the plants mature over two years. Once the weed is mature, small cross-shaped flowers bloom atop pods filled with seeds. A plant can produce as many as 7,900 seeds, which can remain dormant in the soil for up to six years. Since the plants have not yet generated seeds by early spring, March and April is the best time to remove garlic mustard.

"We have noticed improvement in the areas where we have been pulling," Veronica Natale, Director at Garvies Point Museum and Preserve, said. Natale added that at least five years of consistent pulling are required to completely clear an area of garlic mustard since the seeds can remain viable for several years. "Unfortunately we don't always get to every area each year – this is why we need volunteers!"

The volunteers at the pull all had the same goal, but they were in attendance for different reasons. College students like Sean Finn came to the event seeking community service credit.

"I did a lot of library stuff like stocking shelves, but I like being out here, especially in the spring when the weather is nicer," Finn, a senior at St. Francis College said. "We're pulling garlic mustard today that smells like garlic. It's not unpleasant, so that's nice."

Another student, Christopher Lim, was helping the environment for a conservation biology class at Hofstra University. The garlic pull was an event from a list provided by his professor that fit most easily into his schedule. "Since the garlic mustard is an invasive species that is incredibly prolific, they need volunteers to pull as much of it out as possible," Lim, a biology major, said.

Some of the volunteers have a vested interest in removing the plant and have attended similar events in the past. A long-time environmentalist and retired resident of Sea Cliff, Jeanne Millspaugh volunteers with a variety of organizations that are combating invasive species.

"I'm trying to help out Garvies Point Preserve, because they need help," Millspaugh said. "I think it's everybody's responsibility to take care of invasive species that we did not want but are here."

Millspaugh works with the North Shore Audubon Society to combat invasive species like garlic mustard on Long Island. Removing invasive species advances this organization's mission "To promote, protect, and preserve the environment and the birds that inhabit it," since they can overtake resources upon which insects, and therefore birds, depend.

"Most birds feed their [offspring] insects," Peggy Maslow, president of the North Shore Audubon Society. "Many adult birds survive on insects and insects depend on native plants."

Conservation scientists note that having many different species, or biodiversity, maintains a balance in nature. Garlic mustard and other invasive species can disrupt this balance.

"Having that biodiversity, it's one system that's all linked together," Luke Gervase, an education and outreach specialist with LIISMA, said. "When you have one plant that's taking over, it flips that upside-down." Garlic mustard plants also practice allelopathy, which means that they secrete chemicals that restrict plants from growing around them. This can wipe out other plants entirely, leaving a monoculture, or area with only one type of plant, in its wake.

Some environmentalists even caution allowing seemingly harmless invasive species to remain. Without natural predators to keep garlic mustard at bay, hobbyists are observing noticeable change in nature.

Help remove non-native invasive vine Mile-A-Minute from our nature preserve.

Light refreshments for our volunteers. Please RSVP

Saturday, June 15 FATHER'S DAY

NATIVE AMERICAN TOOLS & ARTIFACTS • 11am, 1pm, 3pm

For Father's Day this year learn how to make fire without matches, use a mortar & pestle and pump drill for drilling in stone. Learn how early tools were made and used and get the chance to observe and handle authentic Native American tools and artifacts. Get your faces painted too! Program 1 hr. Suitable for Ages 8+.

FATHER'S DAY BEADED BRACELET CRAFT • 10am – 4pm, ongoing Design an awesome bracelet using beads that would made a great gift! \$5.00 per participant.

FILM: The Legend of the Boy and the Eagle (21 mins.) • 10am, 12pm, 2pm

Tuesday, June 18- Saturday, June 22
POLLINATOR WEEK FILM SERIES ● 2pm, 3pm

In celebration of National Pollinator Week,

Enjoy an engaging and educational film each day geared towards children.

Tues, 6/18: All About Plant Pollination

Weds, 6/19: All About Bugs

Thurs, 6/20: Magic Woods: Monarch Trail Fri, 6/21: City of Bees; Children's Guide

Sat, 6/22: Animal Adaptations

## SUMMER SATURDAY FAMILY PROGRAMS IN JULY & AUGUST

11 am –12 pm each day, Included with museum admission. Join us for our featured Saturday Film.

July 6: FROM GLACIERS TO WIGWAMS: Native American history as it relates to Long Island's geological past. This gallery tour is an overview of Long Island geology, natural history and prehistoric Native American lifeways. Ages 8+.

**July 13: HABITAT HIKE** Join a Garvies naturalist on a guided walk through our nature preserve to discover a variety of habitats. You never know what you may see!

July 20: GEOLOGY OF GARVIES POINT & LONG IS-LAND Learn about local geological phenomena including concretions, rattlestones, Cretaceous clays & plant fossils, & more. Followed by a walk along our rocky beach.

**July 27: BEACH EXPLORATION** Search the shore-line! Discover the plants and animals of our rocky beach including crabs, snails, mussels & more! Wear water shoes or sneakers, no flip flops. Hands-on discovery for kids of all ages.

#### **August 10: WATER EROSION**

See our stream table in action! Observe how water sculpts the land in this engaging program.

**August 17: BIRDS, BUTTERFLIES & BLOOMS:** Join us as we explore our beautiful bird & butterfly friendly gardens in search of butterflies, insects, flowers, birds & pollinators! Hands-on discovery for kids of all ages.

August 24: NATIVE AMERICANS OF LONG ISLAND: Learn about local prehistoric Native Americans including: food, clothing, shelter, culture & more. Experience our "Woodland Village" exhibit, with a real dugout canoe, plant "vegetables", and go in the wigwam.

# FRIENDS OF GARVIES POINT MUSEUM & PRESERVE Join online

#### Theodore Roosevelt Sanctuary

134 Cove Rd., Oyster Bay (516) 922-3200 http://ny.audubon.org/about-us/centers-sanctual

http://ny.audubon.org/about-us/centers-sanctuaries-chapters/theodore-roosevelt

Theodore Roosevelt Sanctuary was founded in 1923. Today, through high-quality programs and a professional staff, TR provides natural science education to children and adults on Long Island and beyond. Most programs are family friendly. **Call for fees and to reserve programs.** 

TRSAC's \$3 million renovation is well underway! To date, we have planted 21,000 native plants, creating beautiful native demonstration gardens. There are new pathways, seating walls, entrance plaza, and fountain plaza. We hope to inspire visitors from near and far to use native plants for birds in their own backyards and gardens. We have raised \$1.9 of the \$3 million need to complete this upgrade and renovation. We still need to fundraise in order to renovate and expand the new education and center building. With these facilities we will be able to expand our environmental education programming and our conservation impact on Long Island. For more information or to get involved, please email Kathryn D'Amico, Center Manager at kdamico@audubon.org or call 516-922-3200
